The screenshot shows a web browser window with the address bar displaying [www.euroleather.com/index.php/homepage/list-of-news-releases/168-greenlife-project](http://www.euroleather.com/index.php/homepage/list-of-news-releases/168-greenlife-project). The page header features the Euroleather logo and the text "The official site of the European leather industry created by COTANCE". A search bar is located at the top left. The main content area is titled "List of news releases" and highlights a "GREENLIFE CLOSING EVENT". The headline reads "Projects ends in Arzignano on 15 December". The text describes the project's goals, achievements, and the closing event details. A "greenLIFE" logo is visible on the right side of the article. The left sidebar contains a navigation menu with categories like NEWS, COTANCE, PROJECTS, CARBON FOOTPRINT PILOT, LEATHER IS MY JOB, LEATHER 2025, TANNERY DATABASE, STATISTICS, PROMOTIONAL MATERIAL, and MUSEUMS. Below the menu are several logos, including "Leather is my job!" and "That's Life! That's Leather".

**GREENLIFE CLOSING EVENT**

Projects ends in Arzignano on 15 December

After 19 months of experimentation, greenLIFE presents innovations in the tanning industry, which aims for environmental and economic sustainability.

Is it possible to reduce the environmental impact of the tanning industry while maintaining its competitiveness? The European Union, through the LIFE programme, funded half the greenLIFE project. Green Leather Industry for the Environment. Launched in June 2014, greenLIFE today – after following the results obtained in the first 19 months of experimentation – looks to the future. With #greenleather2016, the project disseminates its achievements in terms of reducing environmental impact and reusing waste and by-products for the benefit of other industrial sectors.

The event will be held on December 15 in the auditorium of the Higher Technical Institute G. Galilei of Arzignano (province of Vicenza, Italy) from 5 pm to 7 pm CET. For 50 years, this school has been a driving force for the most important industry of the area, the tanning industry. The companies sponsoring the project are Dani and Mastrotto Group, Ikem, Ilsa, and Acque del Chiampo.

The innovations so far achieved through the greenLIFE project include a new oxidative hair removal technique that can now be carried out at an industrial scale, identifying possible outlets in other industries for proteins and keratins retrieved thanks to advanced waste management processing; and presenting new natural tanning and high-efficiency products within a system approach that monitors the present and anticipates the future, through the analysis of the entire product range and industrial activities lifecycle.

Science and research, combined with commitment and the ability to look ahead in an innovative way for the common goal of preserving natural resources, helps to improve the environmental performance of the Italian tanning sector, which accounts for 65 per cent of the European production of tanned leather and 18 per cent of world production.

To ensure involvement of global operators, the event will be streamed online with simultaneous translation into English at <https://goo.gl/ssh6Cx>.
